Stable Leadership for 30+ Years

Exactech started with a dream shared by orthopaedic surgeon Bill Petty, MD, biomedical engineer Gary Miller, PhD, and Betty Petty. They wanted to make a difference in the quality of care provided to patients suffering from injuries or joint diseases like arthritis. For more than 30 years, the things that make Exactech different from the competition—like our surgeon-focused culture and patient-driven innovations—have remained the same. Recent changes, like industry leaders Jeff Binder and Stuart Kleopfer joining our founders and CEO David Petty on our already strong senior management team, are helping us do even more of what we do best.

Broad and Innovative Product Scope

Exactech develops and produces innovative implants, instrumentation and computer-assisted technologies for joint replacement surgery as well as biologic materials and bone cement systems. Its products are distributed throughout the United States and in 35+ markets in Europe, Latin America, Asia and the Pacific.
