

PATIENT INFORMATION (TO BE COMPLETED BY PATIENT)

Name: _____ Age: _____ (years) Male Female

Ability to use shoulder preoperatively:
(i.e. Global Shoulder Function Score)
Score (0-10) with 10 = full mobility

Weight: _____ (lbs.) Height: _____ (inches)

Pain Evaluation: Score (0-10) with 10 = extreme pain

Preoperative pain on a daily basis
(i.e. Visual Analog Score)

Preoperative pain at worst

Preoperative pain when lying on your side

Preoperative pain when touching back of neck

Preoperative pain when pushing with affected arm

(TO BE COMPLETED BY SURGEON)

CASE IDENTIFICATION

Patient ID: _____

Predict+ ID: _____

Surgeon: _____

Shoulder Side: _____

CT planning No CT planning

Patient Diagnosis

- Osteoarthritis
- Rotator Cuff Tear (rTSA only)
- Rotator Cuff Arthropathy (rTSA only)
- Rheumatoid Arthritis
- Osteonecrosis
- Other

Device Types

- Equinoxe aTSA Equinoxe rTSA

What are the patient's comorbidities?

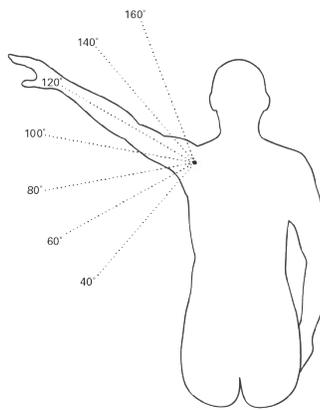

Check all that apply.

- No Known Comorbidities
- Hypertension
- Heart Disease
- Diabetes
- Inflammatory Arthritis
- Tobacco Use

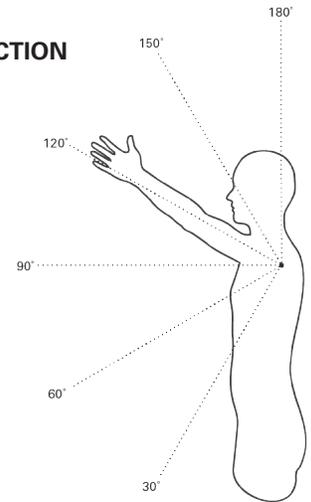

Has the patient previously had a surgical operation on the shoulder? Yes No

Will the upcoming arthroplasty be on the patient's dominant shoulder? Yes No

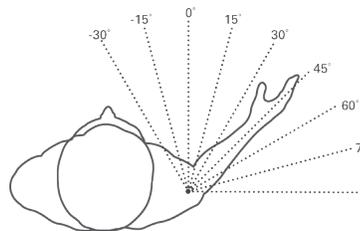

RANGE OF MOTION AND SHOULDER FUNCTION

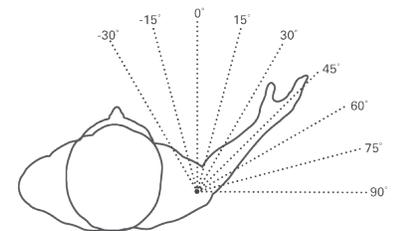

Active Abduction (Degrees)

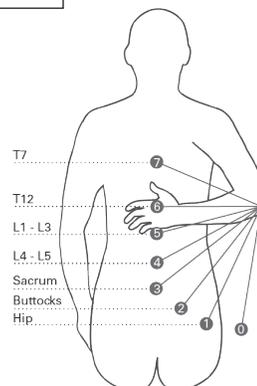

Active Forward Elevation (Degrees)

Active External Rotation with the Arm at the Side (Degrees)

Passive External Rotation with the Arm at the Side (Degrees)

Active Internal Rotation

- T7 or higher Sacrum
- T8 - T12 Buttocks
- L1 - L3 Hip
- L4 - L5 Thigh or Less
